

Terrapro

Product Description

Terrapro is a unique soil amendment composed of calcined diatomaceous earth.

- Encourages the establishment of a deep root system while maintaining the water and releasing according to the needs of roots.
- Improves soil structure and, thanks to its lightweight nature, resists compaction.
- Provides a constant source of moisture to promote uniform growth and improve root structure.
- Promotes drainage and drought tolerance.
- Mixes easily with other soil and remains stable.
- Offers an economical alternative to restoration golf greens.
- Accepted by the United States Golf Association (USGA).

INGREDIENTS

Calcined diatomaceous earth.

FORMAT: 15 kg, 907 kg
SGN : 145 (Mini), 225 (Reg)

DENSITY : 400 kg/m³

Application Tips:

Greens and Tees: Following a conventional ventilation or Verti-Drain, spread sand (1/2 amount) and apply 100-165 lbs per 1000 sq.ft with the "Topdresser" or a fertilizer spreader. Brush all the holes and water thoroughly until the Terrapro becomes light brown to the bottom of the holes.

N.B. Do not use Terrapro if your irrigation system is closed.
